

# Infinity Phase Microscope

Model: IP755

- SEIDENTOPF BINOCULAR HEAD
- WF10X PAIRED EYEPIECES
- 10X,40XR,100XR DIN INFINITY PLAN PHASE OBJECTIVES
- BUILT-IN MECHANICAL STAGE WITH PHASE CONDENSER
- LED ILLUMINATION

The IP755 Infinity Plan Phase Binocular Microscope is a high-performance instrument designed for advanced microscopy applications requiring both brightfield and phase contrast observation. It features a comfortable binocular viewing head with wide-field WF10X eyepieces for comfortable viewing and a wide field of view. The microscope utilizes an infinity optical system, providing superior image quality, improved parfocality (maintaining focus when changing objectives), and greater flexibility for adding accessories. It's equipped with a set of high-quality Infinity Plan objectives: a 4X brightfield objective for overview scans and specialized Infinity Plan Phase objectives (10X, 40X, and 100X oil immersion) for visualizing unstained or transparent specimens. These phase contrast objectives, combined with the integrated phase annuli, enhance contrast and reveal details invisible with standard brightfield microscopy. The 100X objective requires immersion oil for optimal resolution in both brightfield and phase contrast modes. Illumination is provided by an energy-efficient LED light source with intensity control, offering bright, even illumination and long bulb life. This microscope is ideally suited for demanding applications in biology, microbiology, cell culture, pathology, and other fields where both brightfield and phase contrast microscopy are essential.
